

FEED

Plan for the future, eliminate waste with SWOS.

Save time and money.

From projects large and small, front end involvement with the engineering and installation teams will save time and money. SWOS can also lend support during installation, lift rigging design, sea fastening configurations, and new installation techniques making work safer. With our knowledge of synthetics and a vast list of successful applications, coupled with your knowledge of equipment capabilities and capacities, you'll be sure to find a faster, safe, and more economical solution.

Plan for the future and eliminate risk with SWOS.

Our focus at SWOS is to ensure our customers have the right solution for their application. Our technical team has installation experience and rope knowledge that can assist a FEED study avoid problems and zero in on solutions. SWOS will also work hand in hand with your other equipment manufacturers to optimize a complete system geared toward synthetics.

Customers have seen in the past, that the integration of the SWOS Technical Team with the Engineering company during the FEED stage of a project has yielded cost savings for both the project and client. At SWOS, one of our main goals is education on proper use and planning of synthetic applications. SWOS can allocate resources to work with your engineering team to answer any up front questions and weigh in on equipment design, allowing for an optimal solution in the end. With multiple product lines and rope constructions available to SWOS, we have the ability to create custom rope solutions for any application.

Training

Industry Experts. Interactive Training.

Are you wanting to maximize the performance of your rigging system but don't know how?

Whether you manage a team of utility contractors or crew members on a ship, the average worker isn't going to know how to properly handle your rigging mechanisms for optimal performance. SWOS can help you train workers on the front end to mitigate premature failure of ropes.

Industry Experts. Interactive Training.

With decades of rigging application experience within mining, industrial, utility, oil and gas, offshore, and commercial marine industries, SWOS will send an industry expert to host rope training for your next new hire orientation, Captain's Meeting, or on-the-job training. All of our training is interactive to promote the best learning experience for your team.

Inspection, Handling, and Repair Training

SWOS delivers training in the areas of inspection, handling, and repair of ropes including Rope 101 and Splice Training. For customers transitioning from wire rope to synthetic rope, our experts will train your team on the characteristics of each fiber, how they are put together to form a rope, proper use of various fibers, and proper handling techniques in particular environments.

Have an idea for customized training?

Share it with SWOS and we will assign a training expert to work with you.
